

Alfonso Avila

Backend Software Engineer / Data Center Engineer

Salt Lake City, UT | alfonsoavila0479@outlook.com | 801-921-2118 | linkedin.com/in/alfonso-avila-41981b191 | github.com/fonzyg

Professional Summary

Backend software engineer and data center engineer with hands-on data center technician experience, enterprise API support background, and full-stack project ownership. Strong fit for roles that need practical infrastructure support plus backend software delivery: server installs, rack-and-stack support, hardware replacement, Linux/Windows troubleshooting, REST APIs, Java/Spring Boot, React, Python/FastAPI, SQL, Docker, CI/CD, and clear technical documentation. Utah-based for onsite data center support and remote-ready for backend software engineering work.

Core Skills

Backend Software Engineering	Java 17, Spring Boot, Python/FastAPI, REST APIs, JWT, SQL, PostgreSQL/H2/SQLite, Docker, GitHub Actions, documentation, React/Vite dashboards.
Data Center / Infrastructure	Data center support, smart hands/remote hands, rack-and-stack, server installs, hardware replacement, structured cabling, Linux clusters, network components, Windows/Linux.
Enterprise Support	API troubleshooting, JSON/XML/JavaScript, log review, incident ownership, customer communication, escalation to engineering teams, security-aware operations.

Professional Experience

Data Center Technician / Data Center Engineer

Akkodis | West Jordan, UT | Mar 2024 - Present

- Install, configure, test, troubleshoot, and maintain server hardware, server components, and supporting data center infrastructure.
- Support Linux cluster environments, network components, switches, routers, hubs, bridges, and related protocols during installation and troubleshooting work.
- Participate in larger installation efforts, coordinate with technical teams, document issues, and support contingency planning for infrastructure work.

Technical Support Engineer II, API Integration

NICE CXone | Remote / UT | Oct 2021 - Mar 2024

- Troubleshoot enterprise customer API issues by reviewing API calls, timestamps, request/response payloads, JSON, XML, JavaScript, and system logs.
- Replicated customer issues, isolated scripting and integration errors, communicated findings clearly, and escalated complex issues to engineering teams when needed.

IT Support Engineer I, Level 4

Amazon.com Services LLC | UT | Jun 2020 - Jun 2021

- Provided technical support for computer hardware, operating systems, Windows/Linux environments, and network connectivity issues.
- Solved support problems without always relying on predefined SOPs, while maintaining documentation and ownership through resolution.

Client Response Services / Helpdesk Agent

Goldman Sachs | UT | Aug 2019 - Jun 2020

- Handled end-user queries through phone, email, and chat; coordinated with engineering teams and product owners to resolve issues end to end.

Technical Support Engineer

Symantec | UT | Feb 2018 - Aug 2019

- Supported Symantec Messaging Gateway for enterprise customers, including messaging security, threat detection, SSH-based troubleshooting, and VMware/Hyper-V installation guidance.

Selected Projects

- **OakVault:** Backend-heavy cybersecurity deception platform using Java, Spring Boot, React, JWT, JPA, PostgreSQL/H2, evidence exports, and incident timeline workflows.
- **AAA IT Service Toolkit:** Quote, booking, payment, and admin portal for a Utah data center contractor, including customer intake and operational workflow support.
- **Mom's Clothing Biz:** Full-stack e-commerce storefront using React, FastAPI, SQLite, Docker, CI, checkout workflows, and AI-assisted product imagery.

Education & Certifications

Bachelor in Software Development, Western Governors University, Salt Lake City, UT | Expected Dec 2025
